INTRODUCTION

Related statistics

- 99% of Australian adolescents used the Internet in 2011
- 26% of young Australians experienced at least one episode of mental disorder in the preceding year

INTERNET INTERVENTIONS

Definition

- Providing an initial framework for explicit quality control of internet interventions.

Platform requirements

- Independent – independent functioning from the main application (to retain objectivity and guard against interference).
- Unobtrusive – minimum influence on everyday life and behaviour
- Multimodal – ability to collect data from different sensors.
- Secure – ability to keep data and processing secure work for an extended period of time

RESEARCH GOALS

Main goal

- Developing an initial framework for explicit quality control of internet interventions.
